ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anestetic, analgesic, and tranquilizing drugs, prior to, during, and following actual rese teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 2) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and ap Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report, in addition to identifying the IACUC-approved exceptions, this summery inc brief explanation of the exceptions, as well as the species and number of animals affected.

PART 1 - HEADQUARTERS

Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.

²⁾ Each principal investigator has considered alternatives to painful procedures.

³⁾ This facility is eithering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the institutional Animal Care and Use Committee (IACUC). A summary of all the exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a orief explanation of the exceptions, as well as the species and number of animals affected.

October 1, 2007 – September 30, 2008 Explanation for IACUC Approved Exceptions to USDA Regulations Yale University 16-R-0001

Feeding

Seventeen Macaca mulatta, Category C, underwent food regulation to motivate learning. Animals were given a reduced ration of monkey chow during the testing period of up to five days per week. During this time, their diets were supplemented by food rewards earned during testing and by food treats given as part of the enrichment program. The quantity and variety of food consumed was sufficient to maintain the animals' health and well-being. The investigator and the veterinary staff monitored the animals' health status. Daily assessments included body condition, food consumption, behavior, and hydration status. Animals were weighed every other week and returned to full feed when not on study. Animals did not exhibit any overt discomfort or distress.

Watering

Three Macaca mulatta, Category C, and sixteen Macaca mulatta, Category D, underwent water regulation to enhance performance and motivation to learn and perform complex tasks. Fluid intake was sufficient to maintain the animals' health and well-being. This was accomplished by permitting the animals to earn fluid to satiety each day during behavioral training and testing, providing ad libitum chow and treats and stopping fluid regulation when animals were not on study. Daily assessments included body condition, food consumption, behavior, and hydration status. Animals were weighed weekly and did not exhibit any overt discomfort or distress.
