Humane Endpoints for Socorro 1412

Socorro (1412) is a 31 year old HCV negative, HBV negative, HIV negative female chimpanzee who has been diagnosed with multiple chronic disease processes by the veterinary staff at APF. The disease processes that Socorro is afflicted with includes cardiovascular disease and systemic hypertension.

Clearly defined criteria and responsibilities have been agreed upon and the staff trained to observe for decompensation clinical signs. This does not preclude providing supportive therapy as needed, so long as the outcome will involve the possible return of Socorro to an acceptable quality of life in a reasonable amount of time. Humane euthanasia will be performed as required by the veterinarian in attendance.

1. Body weight should be monitored and used as an indicator of a potential debilitating condition. It is recommended that a loss of 25% of body weight within 3 months, a body condition score of 1 or a decrease below 45kg could be an endpoint. Socorro has unresponsive anorexia for 4 days with significant weight loss then euthanasia should be considered.
2. Socorro has been diagnosed with systemic hypertension which could possibly make her prone to a cerebrovascular insult. While Kim conditions are being medically managed, none of these treatments are curative. Possible early signs of stroke are loss of coordination, weakness in arms legs, and/or face (especially unilateral) and seizures should be considered a potential endpoint.
3. Socorro has been evaluated by the veterinary staff at APF. Her advanced cardiovascular disease puts him at high risk for sudden death. While these conditions are being medically managed, none of these treatments are curative. Signs of advanced cardiac failure such as advanced exercise intolerance or respiratory distress should be considered a potential endpoint.

It is the consensus of the Alamogordo Primate Facility veterinary staff that due to the grave prognosis associated with these disease processes, Socorro (1412) should be humanely euthanized if one or several established endpoints are reached.

1178 Aggie, 1380 Rayna, 1412 Socorro, 1424 Nina are currently housed with 1375 Libby and 1279 Lena.

REASON: these four females are being reintroduced into there family group.

(DATE: 5.2.03) OBSERVATION PERIOD IS BETWEEN 7:59 A.M. AND 8:14 A.M.

Aggie, Rayna, Socorro, and Nina are reintroduced at 7:59 a.m. during this time Libby smells Aggie as she travels through the lateral door into the 1/3rd then climbs onto the perch with Nina but she doesn't stay for very long she climbs away. They have received each other positively.

During the last 10 minutes the females have been lounging, there hasn't been a lot of interacting. Libby has been displaying using the hanging barrel, this is typical behavior for Libby to display and afterwards she settles down then she goes back at it again depending on the situation.

8:14 a.m. during this time the den is quiet, the females are lounging. Aggie, Rayna, Socorro, and Nina where greeted positively from Libby and Lena, Libby has shown negative behavior as she displays but isn't directed to her peers, the behavior is more directed to the visitor for example the technician or to certain techs. She demonstrates this behavior during interaction and she settles down, then she repeats it.

CHIMPANZEE PERSONALITY TRAIT ASSESSMENT

Chimpanzee personality assessments can be made with this questionnaire by assigning a numerical score for all of the personality traits listed on the following pages. Make your judgments on the basis of your own understanding of the trait guided by the short clarifying definition following each trait. The chimpanzee's own behaviors and interactions with other chimpanzees should be the basis for your numerical ratings. Use your own subjective judgment of typical chimpanzee behavior to decide if the chimpanzee you are scoring is above, below, or average for a trait. The following seven point scale should be used to make your ratings.

1. Displays either total absence or negligible amounts of the trait.
2. Displays small amounts of the trait on infrequent occasions.
3. Displays somewhat less than average amounts of the trait.
- ✗ → 4. Displays about average amounts of the trait.
5. Displays somewhat greater than average amounts of the trait.
6. Displays considerable amounts of the trait on frequent occasions.
7. Displays extremely large amounts of the trait.

Please give a rating for each trait even if your judgment seems to be based on a purely subjective impression of the chimpanzee and you are somewhat unsure about it. Indicate your rating by placing a cross in the box underneath the chosen number.

Finally, do not discuss your rating of any particular chimpanzee with anyone else. As explained in the handout accompanying this questionnaire, this restriction is necessary in order to obtain valid reliability coefficients for the traits.

AUTISTIC: Subject often displays repeated, continuous, and stereotyped behaviors such as rocking or self claspings.

	1	2	3	4	5	6	7	
least	☒	☐	☐	☐	☐	☐	☐	most

CURIOUS: Subject has a desire to see or know about objects, devices, or other chimpanzees. This includes a desire to know about the affairs of other chimpanzees that do not directly concern the subject.

	1	2	3	4	5	6	7	
least	☐	☐	☐	☐	☒	☐	☐	most

THOUGHTLESS: Subject often behaves in a way that seems imprudent or forgetful.

	1	2	3	4	5	6	7
