Inspection Date: 01-FEB-18 Site Number: 001

Inspector: THOMAS SECOR, D V M,

Section: _____

3.127(c) FACILITIES, OUTDOOR.

Accumulation of ice around the base of livestock water fountains in the west sheep barn. Large accumulations of ice on the concrete pads or perimeter of livestock water fountains can pose a slippage risk to livestock and can result in injury or inability to freely access water from the fountains. Ice buildup on and around fountain pads needs to be removed or traction substrate provided (e.g. sand) . Preventive measures should be taken to improve water drainage around the base of fountains or to mitigate ice buildup around the base of fountains during freezing temperatures.
