Humane Endpoints for Sherril 778

Sherril (778) is a 38 year old HBV, HIV, HCV negative female chimpanzee who has been diagnosed with diabetes mellitus by the veterinary staff at APF. Since early 2011, she initially began to develop a resistance to oral medications that was prescribed to treat her hyperglycemia. She is obese and borderline hypertensive as well. Additional manipulations to current medication dosages as well as the possible addition of insulin may be needed.

Clearly defined criteria and responsibilities have been agreed upon by the veterinary staff and the animal care staff trained to observe for decompensation clinical signs. A scoring system to evaluate the criteria will be used to monitor signs of deterioration. Currently, there is a Do Not Resuscitate (DNR) order for Sherril. This does not preclude providing supportive therapy as needed, so long as the outcome will involve the return of Sherril to an acceptable quality of life in a reasonable amount of time. Humane euthanasia will be performed as required by the veterinarian in attendance.

1. Responsiveness, appetite and body weight should be monitored. Body weight will be used as a current potential indicator a debilitating condition. It is recommended that a loss of 25% of body weight within 3 months, a body condition score of 2 or a decrease below 42kg could be an endpoint. If Sherril has unresponsive anorexia for 4 days with significant weight loss then euthanasia should be considered.

2. It is the consensus of the Alamogordo Primate Facility veterinary staff that due to the grave prognosis associated with the advanced DM disease processes, Sherril will not be resuscitated in the event of acute decompensation and Do Not Resuscitate (DNR) order has been in place since May 11, 2011.

778 Sherrill

I am working with her to get a heelstick to check her glucose.

9-2-03—Not very friendly. Does not interact with me.

9-3-03—Paces around the cage a lot and looks down the hall to see what else is going on.

9-4-03—Not much interaction. She will come to the front briefly but is not real interested in me.

9-5-03—Let me touch her foot briefly under the door. Tries to grab me and smash my fingers. Not very friendly.

9-8-03—She came to the front when I first came in. She allowed me to touch her foot under the door once and then she moved to the middle of the cage and laid down. She would occasionally come by the front but would not sit down and would not interact with me.

9-9-03—She came to the front for a short time. During the ½ hour that I worked with her she placed her foot on the fence two times. These were not on my command more of just a position for her. I did touch her foot both times and praise her and give her a reward. After about 15 minutes she pretty much ignored me and was paying more attention to what was going on down the hall.

9-10-03—She will not pay any attention to me.

9-11-03—A/C was not ready.

9-12-03—She just ignored me today. Does not come to the front much. Stayed at the back and layed on the perch.

9-15-03—Would not pay any attention to me today.

9-16-03—Today I had animal care put her into a transfer box. I squeezed it up to where she did not have a lot of room to move around. I touched her foot and said "foot" and tried to give her juice but she ignored it and would not take any. She recognized my touching her foot and tried to grab me with her toes. She also tries to grab with her hands. She is not a very people friendly animal.

9-18-03—Not cooperative. Very grabby.

10-01-03—She was in the box today and appeared a little more friendly. She allowed me to touch her toes one time and play with them for a very short time. She let me scratch her back and did not attempt to grab me.

10-03-03—Animal care did not have her in the box so I worked with her inside the den. No cooperation. She will not pay any attention to me.

10-06-03—She was being very ornery today. Trying to grab me through the bars and even trying to grab with her feet.

10-07-03—She was inadvertantly left off the schedule and animal care let her outside with her group for forage.

10-08-03—Animal care was weighing animals. I helped them weigh some and watched as they reinforced several.

Sherril /778

Training for heelstick is being transferred over to animal care. They have observed me do it and now I am watching them perform the procedure. They are doing her in the transfer box.

Today was the first day I observed them do her. (b)(6) was the technician performing the procedure and (b)(6) observed.

She cooperated reasonably well. She still tries to grab them between the bars. (b)(6) was able to perform the procedure and do the heelstick and obtain glucose results.

6-21-11

Sherril

I observed animal care perform the heelstick procedure on Sherril this am. They had done her earlier then the scheduled time but it was decided to do her again so that I could observe (b)(6) performed the procedure with (b)(6) and myself observing.

Sherril was agitated,screaming and trying to grab him through the bars on the transfer box. It took approximately 5 minutes for him to perform the procedure. He did obtain the heelstick and get the glucometer results.

(b)(6)

This is the 2nd observed heelstick.

(b)(6)

Uploaded to Animal Research Laboratory Overview (ARLO) on 12/17/2020

6-23-11

Sherril

Today was the third heelstick performed by animal care and observed by myself and (b)(6) obtained the heelstick and got the glucose results. Sherril was less grabby today and more cooperative than she was previously.

Since this was the required third observation and it went well, Sherril and her glucose monitoring is now considered turned over to animal care. They are required to coordinate with the veterinary staff on when the heelstick is to be performed. They are also required to report the glucometer results to (b)(6) (b)(6)

Although animal care is able to perform the procedure and cooperated very well today please note that with the transfer box and the open space between the bars there is always the possibility of her reaching out and grabbing the technician.

(b)(6)

Sherril's heel-stick training has now been transferred to AC. But, Sherril's behavior is unpredictable from day to day, regarding her cooperation. This may be a safety concern to be aware of,

CHIMPANZEE PERSONALITY TRAIT ASSESSMENT

Chimpanzee personality assessments can be made with this questionnaire by assigning a numerical score for all of the personality traits listed on the following pages. Make your judgments on the basis of your own understanding of the trait guided by the short clarifying definition following each trait. The chimpanzee's own behaviors and interactions with other chimpanzees should be the basis for your numerical ratings. Use your own subjective judgment of typical chimpanzee behavior to decide if the chimpanzee you are scoring is above, below, or average for a trait. The following seven point scale should be used to make your ratings.

1. **Displays either total absence or negligible amounts of the trait.**
2. **Displays small amounts of the trait on infrequent occasions.**
3. **Displays somewhat less than average amounts of the trait.**
4. **Displays about average amounts of the trait.**
5. **Displays somewhat greater than average amounts of the trait.**
6. **Displays considerable amounts of the trait on frequent occasions.**
7. **Displays extremely large amounts of the trait.**

Please give a rating for each trait even if your judgment seems to be based on a purely subjective impression of the chimpanzee and you are somewhat unsure about it. Indicate your rating by placing a cross in the box underneath the chosen number.

Finally, do not discuss your rating of any particular chimpanzee with anyone else. As explained in the handout accompanying this questionnaire, this restriction is necessary in order to obtain valid reliability coefficients for the traits.

least	☐	☐	☐	☑	☐	☐	☐	most

Obtained by Rise for Animals.
Uploaded to Animal Research Laboratory Overview (ARLO) on 12/17/2020

AFFECTIONATE: Subject seems to have a warm attachment or closeness with other chimpanzees. This may entail frequently grooming, touching, embracing, or lying next to others.

	1	2	3	4	5	6	7	
least	☐	☐	☐	☐	☐	☑	☐	most

AGGRESSIVE: Subject often initiates fights or other menacing and agonistic encounters with other chimpanzees.

	1	2	3	4	5	6	7	
least	☑	☐	☐	☐	☐	☐	☐	most

EXCITABLE: Subject is easily aroused to an emotional state. Subject becomes highly aroused by situations that would cause less arousal in most chimpanzees.

	1	2	3	4	5	6	7	
least	☐	☐	☐	☑	☐	☐	☐	most

CAUTIOUS: Subject often seems attentive to possible harm or danger from its actions. Subject avoids risky behaviors.

	1	2	3	4	5	6	7	
least	☐	☐	☐	☐	☑	☐	☐	most

INQUISITIVE: Subject seems drawn to new situations, objects, or animals. Subject behaves as if it wishes to learn more about other chimpanzees, objects, or persons within its view.
