Type: ROUTINE INSPECTION
Date: 15-FEB-2017

3.75(c)(1) CRITICAL

HOUSING FACILITIES, GENERAL.

On January 26, 2016 a young female macaque was found dead in the outdoor portion of her enclosure. This animal had its head entrapped in a ball which was used for enrichment in the animal's enclosure. The ball was described by the facility as having a hole chewed into it sufficient to allow the entire head of the animal to become entrapped with only the mandible of the jaw exposed. This animal died at some time between the PM and AM animal checks. The necropsy of the animal was not conclusive and the facility determined that the likely cause of death was prolonged exposure to the cold in combination with the stress of not being able to remove her head from the ball.

At the time of the inspection today the inspectors noted a few badly worn enrichment items. A couple of these items had holes in them. One enrichment item in particular known as a "pill" had a hole in it large enough for a juvenile macaque to stick its head into. This enrichment item has worn to the point that it is potentially hazardous to animals in the enclosure in which it is being used. Furniture type fixtures or objects must be sturdily constructed and strong enough to provide for the safe activity and welfare of the animals in the enclosure. When excessively worn these items must be removed from the enclosure in order to minimize the risk of head or other limb entrapment.

Corrected at the time of the inspection.

This inspection and exit interview were conducted with various Johns Hopkins University personnel.

Additional Inspectors

Maginnis Gwendalyn, Veterinary Medical Officer
Cohen Kimberley, Veterinary Medical Officer

Prepared By: HAMMEL KURT, D V M USDA, APHIS, Animal Care
