April 18, 2018

Director, Division of Compliance Oversight Office of Laboratory Animal Welfare National Institute of Health 6705 Rockledge Drive RKL 1, Suite 360, MSC 7982 Bethesda, MD 20892-7982

Dear Director,

This self-report is a follow up report regarding an incident that occurred on 3/16/2018 regarding two groups of *Macaca fascicularis* had come into contact with one another within an indoor backup area of their shared enclosure. The Alpha Genesis, Inc. assurance number is D16-00387 (A3645-01).

To make personnel entry doors into these areas more secure, a chain line ante room will be added to surround the personnel access door. Thus personnel must enter the chain link enclosure and close the door behind them before opening the access door entering the animals' primary enclosure. This will provide an added layer of security, preventing unfamiliar animals from encountering one another, should the door to the primary enclosure fail.

Respectfully submitted,

(b) (6)

March 26, 2018

Director, Division of Compliance Oversight Office of Laboratory Animal Welfare National Institute of Health 6705 Rockledge Drive RKL 1, Suite 360, MSC 7982 Bethesda, MD 20892-7982

Dear Director,

This self-report describes an incident that occurred on 3/16/2018 at our Hampton Facility. The contract number that supported these animals is HHSN272201000051C. The funding component has been notified. The Alpha Genesis, Inc. assurance number is D16-00387 (A3645-01).

At approximately 5:30pm staff found that two groups of *Macaca fascicularis* had come into contact with one another within an indoor backup area of their shared enclosure. The animals gained access to this area through separate doorways and had been fighting. Staff separated the animals and secured the area. Three animals were found dead due to trauma, and four others taken to clinic died from trauma over subsequent days.

Doors leading to the backup area are secured with a slide bolt and a lock that is placed over the bolt to provide secondary security. It is our assessment that locks and/or bolts on two separate doors had not been secured by the assigned Animal Caretaker and that his Supervisor had not ensured that the doors were properly secured. As a result of this incident staff have been retrained on properly securing and checking doors. The supervisor was disciplined and the Hampton Site Director was terminated for failing to provide sufficient staff oversight. In addition, we are actively investigating additional methods to make entry doors more secure.

Respectfully submitted,

(b) (6)
