	Report.pdf; Z14323 Animal Clinical Report.pdf; Z14367 Animal Clinical Report.pdf

Hi Lee-Ronn and Lynne,

I have attached the reports for the four dams for your review. The Panels Reports will have all the test results except for the in-house external parasite exam and fecal o & p. Those results will be found in the Animal Clinical Report for each dam.

Let me know if there is anything else you need.

Best, Tess

Theresa (Tess) House, DVM MPH Supervisory Veterinarian Washington National Primate Research Center Arizona Breeding Colony Office phone 206.685.1842 Mailing address- P.O. Box 20836/Mesa, AZ 85277

PANELS - Physical Exam

Animal: L07293	Age: 11 y 2 m	Project: ABC Mn Breeding	
Sex: Female	Weight: 9.93 on 1/28/19	Investigator: Breeding 75 01	
Species: Macaca nemestrina	Location: AA142-D2	IACUC: 4202-02	

Physical Exam	Panel Comments	Body Condition Score	Hydration	Physical exam type	Pulse	Temperature	Weight	
1/28/19	Sedated for sample collection and exam (NYU infant). BAR prior to sedation. BW 9.93 kg, T 98.8, P 170, euhydrated. Good milk production from both mammary glands. Mild dental calculus. Heart and lungs auscultate WNL. Abdominal palpation WNL, uterus contracted down. Mild amount of bloody vaginal discharge but WNL for postpartum.	3.5 - Slightly Overweight	Adequate			98.8	9.93	
Result Comments								
1/24/19	Sedated dam to remove infant (NYU shipment). BAR prior to sedation. BW 10.39 kg, T 99.8, P 170, euhydrated. Mild dental calculus diffusely. Heart and lungs auscultate WNL. Milk easily expressed from each mammary gland. Abdominal palpation WNL, uterus contracted down. Normal amount of vaginal bleeding for postpartum. No other significant findings on exam.	3.5 - Slightly Overweight	Adequate			99.8	10.39	
Result Comments								
9/24/18	BAR before sedation. W:10.36, BCS:3.5, T:102.1, HR:180. Euhydrated. Moderate calculus- ultrasonic cleaning by CJM. NAD on PE. Placed TB test in right eyelid. Collected 12ml blood.	3.5 - Slightly Overweight	Adequate			102.1	10.36	
Result Comments	·

1/23/19	Sedated for CBC. Infant on NYU list for shipment going out Feb. 11th. BAR prior to sedation, T 99.9, P 150, euhydrated. Heart and lungs auscultate WNL. Abdominal palpation WNL. Still has some milk expressed from each mammary gland. Uterus WNL for postpartum.	3.5 - Slightly Overweight	Adequate				99.9	9.06
Result Comments								
1/14/19	Sedated for infant pull for NYU. BAR before sedation. Euhydrated, W:10.13, BCS:3.5/5, T:101.8, HR:172. Good milk production bilaterally, uterus regressing, bloody vaginal discharge, consistent with postpartum status. Moderate dental calculus- ultrasonic scale by SH. 3 small flat papillomas (<0.5cm) on right ventral abdomen. NAD on OE. Pulled pulled for CBC/CHM/Cocci/virology/filovirus. Pulled into 142 to await test results. Gave Meloxicam and Diazepam.	3.5 - Slightly Overweight	Adequate				101.8	10.13
Result Comments								
9/24/18	 BAR before sedation. W:9.68, BCS:3.5, T:101.3, HR:214. Euhydrated. Moderate calculus- ultrasonic cleaning by CJM. ~1cm firm skin tag at left side of tail base (no tail present). NOAD on PE. Placed TB test in right eyelid. Collected 12ml blood. 	3.5 - Slightly Overweight	Adequate				101.3	9.68
Result Comments								
3/12/18	WNL; Tuberculin serial #444x Exp 6/17/18; Resp 30, moderate calculi, moderae gingivitis, CBC/chem - TH	2.5 - Lean	Adequate	Physical Examination, complete	200		102.4	7.54
Result Comments								
9/5/17	Moderate dental calculi was hand scaled. Remainder of the exam WNL. CBC/ Chem/serology collected. Tuberculin serial #444x Exp 6/17/18 - LC	2.5 - Lean	Adequate	Physical Examination, complete	170		99.6	7.17
Result Comments								

3/27/17	Marked dental calculi was hand scaled. Moderate dental wear. Remainder of the exam WNL. Tuberculin serial #444x Exp 6/17/18 - LC	BC2 Thrifty (0-5 scale)	Adequate	Physical Examination, complete	170	102.1	6.92
Result Comments					and a second

Sex:	Female	Weight: 6.2 on 2/1/19	Investigator: Breeding 75 01	
Species:	Macaca nemestrina	Location: AA142-B2	IACUC: 4202-02	

Physical Exam	Panel Comments	Body Condition Score	Hydration	Physical exam type	Pulse	Temperature	Weight
1/28/19	Sedated for exam and sample collection (NYU infant). BAR prior to sedation. BW 6.41 kg, T 101.2, P 160, euhydrated. Mild dental calculus diffusely. Milk expressed from each mammary gland. Heart and lungs auscultate WNL. Uterus contracted down. Bloody vaginal discharge noted (normal amount for postpartum).	3.5 - Slightly Overweight	Adequate			101.2	6.41
Result Comments							
1/21/19	Sedated dam to remove infant; dam setting infant down during cleaning in room or other distractions. Infant is on list for NYU shipment. BAR prior to sedation. BW 7.16 kg, T 100.9, P 200, euhydrated. Good milk production bilaterally. Heart and lungs auscultate WNL. Uterus firm and contracted down, non painful on palpation. Normal amount of vaginal discharge post partum.	3.5 - Slightly Overweight	Adequate			100.9	7.16
Result Comments							
1/20/19	Sedated dam for exam of infant. While shifting dam/infant out of group, trauma to the infant's right forearm occurred from another dam. Z14323 was BAR prior to sedation. T 99.5, P 170, euhydrated. BW 7.12 kg. Heart and lungs auscultate WNL. Bilateral milk expressed from each mammary gland, uterus contracting down, normal amount of post-partum vaginal bleeding.	3.5 - Slightly Overweight	Adequate			99.5	7.12
Result Comments							
10/16/18	Sedated for semi-annual exam. BAR prior to sedation. BW 6.51 kg, T 101.9, P 160, euhydrated. Mild to moderate dental calculus (ultrasonic cleaning by CJM), heart and lungs auscultate wnl, pregnancy confirmed on ultrasound.	3.5 - Slightly Overweight	Adequate			101.9	6.51
Result Comments							

PANELS - Physical Exam

7/31/18	Sedated today for cbc/chem and cocci titer follow up. Observed wounds on upper right arm, a few fresh and some dry and healed. One older wound on sex skin 1cm, healing. Gave NSAIDs.	3 - Optimum	Adequate			103.5	5.74
Result Comments				1			
7/9/18	Sedated for bloodwork and radiographs. BAR prior to sedation, no audible breathing at rest (will be audible when active). 5% dehydrated, BCS 3/5, T 102.6, P 180, scar/thickened skin over right nasal passage (checked for foreign bodies-none found), increased lung sounds on inspiration only, no crackles ausculted, heart sounds are WNL, rest of exam unremarkable, did have liquid stools while in jump box	3 - Optimum	3-5% Dehydration			102.6	5.55
Result Comments							
6/28/18	hand caught for cocci titer due to AT's notated for coughing. Nothing observed at this time.	3 - Optimum	Adequate				5.59
Result Comments

Daily Observation - Pain, Sto%, Attitd, Appet, Hydr

02/Jul/15	Information	Comments
Abnormality	Cage side observation	 NHP has had erratic weight trend. Last weight was 7.7 kg one month ago and now 6.45kg. The 7.7kg may be an error since it doesn't fit the trend of all other points. Weight is around pre-pregnancy weight. Will monitor to make sure that weight loss doesn't continue. LC. //7/13/15 BW last week was 6.3kg, continue to monitor. LC. // 7/16/15 BW is 6.15kg today, continuing to trend down. Continue to monitor. LC. // 7/13/15 BW is 6.25kg, stable. Feces is normal. Entered NHP into a social group uneventfully. Continue to monitor. LC. // 8/5/15 BW is 6kg, trending down still, but BCS and activity remain good. Will continue to monitor. LC. // 8/17/15 Cocci titer came back IgM and IgG 1:2. This may explain the BW loss. Will start treatment with fluconazole and monitor response. LC. //8/28/15 BW is 6.05kg, stable. Continue TX. LC. //9/17/15 BW is 6kg, stable. Continue TX. LC. //10/13/15 BW is up to 6.41kg. Physical exam during TB testing was unremarkable. BCS = 2.5/5. Cocci titer was submitted. LC. //10/20/15 Cocci titer came back negative. Will allow treatment to discontinue in 3 weeks. LC. //10/29/15 BW is stable at 6.24kg. Continue TX. LC. // 11/10/15 BW is stable at 6.31kg. LC. //11/23/15 BW is stable at 6.1kg. Fluconazole treatment has ended. Close record and monitor as routine. LC.

Wound care	Wound Care(Clinical)	NHP seen out in group with wounds on both sides of tumescent sex skin. sedated. Noted with two wounds on L side of sex skin at base of tail, one and the other ~1cm. A third wound on the R side of sex skin at base of tai All slightly deep, to subcutaneous tissue. Also superficial ~5mm lacerat platar surface of L foot D4 at distail inter-phalangeal joint, minor abrasion D5, minor bruising and 2 minor lacerations (<5mm each) to ventral L arr proximal and one distal to elbow joint, and minor bruising to L ventral new re-check wound to palmar D3 on L hand, still slightly open but scabbed affected areas clipped free of hair, cleaned with chlorhexadine, and tissu applied. Although cycling, performed ultrsound while sedated, uterus close wounds appear minor, no additional tx necessary at this time. Released to after recovered from sedation, case closedAMR

Daily Observation - Pain,		
Sto%, Attitd, Appet, Hydr		

02/Mar/14	Information	Comments
Abnormality	Wound Care(Clinical)	 NHP noted with trauma to L hand, 1cm laceration to distal pad of D3, moderately deep, no bone visible. Cleaned and applied tissue glue. Moved to single animal cage (with infant). Monitor healingAMR // 3/4/14- Wound appears to be healing normally, no additional tx necessary, case closedAMR // 3/6/14: Reopened case. Laceration on D3 opened back up. Sedated NHP to clean and examine. Finger tip of D3 is fileted open as fat pad of finger is preventing a good adhesion back to itself. Debrided and sutured finger tip with 2-0 polysorb simple interrupted sutures. Placed tissue glue over sutures and placed a light bandage. Administered NSAID and antibiotic. Monitor healing, suture removal in 10-14 days. KJL // 3/14/14: NHP has removed all sutures from finger, wound appears to be healing nicely. Her infant had all sutures removed today and wound looks healed also, so dam+infant moved to 242C in prep for re-introduction to group. As a result of fighting through the mesh, dam sustained ~1cm laceration to lateral side of L hand and small puncture on dorsal side of L hand. Area clipped or hair and cleaned with dilute nolvasan, laceration closed with 2-0 polysorb (3 S.I.) and soft bandage applied. Prescribed antibiotics and NSAIDs for pain/swelling. Remove/change bandage in 3-4 days (if still on), remove sutures in 14 days. NHP also noted with decrease in BW when weighed today. Feces has been nicely formed, BW loss possibly due to housing in single animal cage. Prescribed protein powder and nurtitional support, re-check BW in ~2 weeksAMR // 3/18/14: NHP noted with soft-fluid feces for 3+ days. Add in Pepto and probiotics and monitor response. KJL//3/24/14 NHP was lightly sedated to removed last 2 skin sutures on lateral aspect of left hand, case closed and monitor as routine. cac.

Administration of medication								
Infant removed from dam	Mead, Caroline	Dam: infant Z19024, removed from dam -for nursery rearing-dam heath screening, selected for NYU shipment-This was the dams fist time pregnancy, unable to identfy if dam displays normal behavioral instinct to raise infant, due to pulled in cage day before birth, gave birth overnight in cage, the dam was was stressed in cage setting and room with cage has a lot of activity with staff, dam would hold infant upside down, then set down and dam displayed alot of LS (pacing) behavior-next birth will monitor and ideal situation leave in group-CJM						
Physical Exam		Sedated dam to remove infant. New birth overnight in room 142. Dam holding infant upside down (staff was trying to clean in room); infant on list for NYU sale. Dam BAR prior to sedation, small amount of placenta noted in pan. BW 7.01 kg. T 98.9, P 190, euhydrated. Mobile deciduous upper left first premolar with mild bleeding noted. Heart and lungs auscultate WNL. Uterus contracting down. Placenta found attached to infant once dam sedated. Unable to express milk from either mammary gland on dam. Rest of exam WNL.

Without knowing at all what is going on, I can't say if steroids would mess her up. You just had compelling counter points to all of my points that seemed that a lot of this could be chalked up to pregnancy/abortion. But given what you've said, I'd probably give it a week to see if the antibiotics and supportive care turned her around, especially if the VF tx efficacy could be effective.

DDDOOOHHH!!! I already started the steroids this morning.....I did a 5 day course at 1 mg/kg, then 5 doses taper at 0.5 mg/kgDo you think that will totally mess her up??

The machine was throwing out a lot of errors yesterday for that sample and the techs had to run it twice, which is probably why the creatinine didn't read.

Morning Dean!!

Thank you so much for your EXTENSIVE response!! I REALLY appreciate you taking the time to help me out!! Tess is out of town so I didn't have anyone else to consult with down here. Bloods were taken before fluids were administered. We did get a vaginal swab and a fecal Biofire. I'll have the techs collect a fecal for occult blood (no endoscope here).

We were originally thinking metritis when we pulled her for exam and based on the vaginal discharge but the blood work threw me for a loop... I don't often see BW that messed up, so I very much appreciate your second pair of eyes/brainpower.

I wasn't overly worried about the anemia- we often see that postpartum, and I hadn't considered it could be from chronic DZ, so I will definitely keep that on my radar.

I assumed the glucose was high due to stress (abortion, feeling junky for a few days, plus catching the animal/restraint), although it is a lot higher than we normally see with stressed animals. Diabetes crossed my mind... We didn't get a good urine sample yesterday, and it was free catch. Tess was the one examining the animal (I scribed) and she didn't want to do a cysto at the time for fear of tracking possible infection around the abdomen. I don't think Tess looked anywhere else in the abdomen during her US, other than the uterus

Liver issues crossed my mind, but I would have expected other liver values to be wonky as well...

I was reading that ALP can be pretty elevated around parturition in dams (not specifically monks), but I'm not sure what ALP half life is and if it would still be this elevated 4 days after parturition.

Definitely thought the BUN was pre-renal due to severe dehydration (12% by skin tent). And the bilirubinemia I attributed to possible anorexia/weight loss since the serum wasn't hemolyzed.

The hypoproteinemia I thought was probably related to diarrhea. It's not uncommon to see that in our skinny/sick monks and we can usually correct it with protein supplements added to the nutritional support.

Cholestatis (of pregnancy) was the top of my list. Followed by PLN/PLE. Maybe complicated by metritis?

I'll add a short course of steroids to her TX plan today. We just have to be careful with steroids and VF cause they decrease the efficacy of the fluconazole, although that's the least of this girl's problems right now.....Will plan to repeat PE/Blood in 2 weeks, unless she takes a turn for the worse in the mean time.

Hope you have a decent day!

Best! CMM

So this animal's history shows she's a prolific breeder and also her weight fluctuates quite a bit (BCS 1.5-3/5, wt 5.2kg to 7kg non-pregnant) and she is prone to GI infections and abnormal feces. The purulent vaginal discharge seems unsettling in light of the ADR, dehydration, decreased BCS, and urine colour, and recent still birth. The fact that the uterus felt contracted and firm makes me less suspicious about an endometritis from a retained placenta. And there is no fever, but then again she has been on meloxicam I think and she's also dehydrated, so maybe temp should actually be higher?

I would expect the leukogram to look a lot more wonky with a pyometra but it looks darn normal. The HCT is low, but from anemia of chronic disease, pyelonephritis, GI bleeding, other hemorrhage, or was this sample taken after the IV fluids were bloused... or some other reason such as chronic renal disease and decreasing EPO production? The chem is more concerning. Is that glucose high from postprandial, stress, DM/DKA? I'm not sure why creatinine isn't reading. The BUN could be pre-renal from dehydration, but that seems really high. The low TP with both hypoalbuminemia and hypoglobulinemia is also concerning (PLE, liver failure, hemorrhage?). What has the stool looked like and have you submitted for a occult fecal blood to look for a PLE? This animal has a looooooong history of E coli and bad poops, so maybe she has an underlying IBD type condition that has led to panhypoproteinemia (digested blood would also explain

your BUN and anemia nicely). Given that ALKP, bilirubin, and cholesterol are all elevated, you might have some cholestasis/pancreatitis going on? Can you visualize the gall bladder on ultrasound to rule out a biliary mucocele? But bilirubin could also be elevated from RBC destruction or anorexia. And cholesterol could also be elevated with a PLN.

Given the animal's history and the blood work results, it sounds a lot like this is either liver failure (probably secondary to amyloidosis from antigenic stimulation of coccidioidomycosis) or a rip-roaring IBD causing a PLE. I guess I wouldn't take fatal fasting syndrome off the list either. Your bases are covered for infectious causes with 2 antibiotics, and the lack of inflammatory leukogram makes this seem less likely? I would want a liver biopsy (ultrasound guided with tru cut biopsy needle) and a fecal occult blood (assuming there are no means to get endoscopy samples). Treatment wise, I would only add steroid to your plans, as you are treating for VF, and it will help with PLE. I suppose that a urine culture (via cysto) is the other main thing I'd want, to rule out a PLN, possibly from an ascending pyelonephritis/glomerulonephritis from GI and/or aborted fetus. Failing that, I guess a swab of some of that vaginal discharge. If you can get a clean speculum in there and swab as close to the cervix as possible, and you get an E.coli or other GI type bug, it might be a safe assumption that it could've translocated further to the uterus or kidneys.

Sorry for the stream of consciousness thoughts, here's one more: could a IBD/PLE be so severe that the bile ducts become inflamed and you get at least partial cholestasis? I bet they could! Anyhow, I'll think more on it. Bring it up tomorrow, we need better brains on this than mine.
