<b>3. Number of animals used in the study.</b> 142	<b>4. Species (common name) of animals used in the study.</b> Guinea pig	
<b>5. Explain the procedure producing pain and distress.</b> The inoculation of Shigella species are being used to test the immune response.		
<b>6. Provide the scientific justification for not providing the appropriate anesthetics, analgesics, or tranquilizing drugs during procedures where the animal experienced accompanying pain or distress greater than momentary or slight.</b> The study of the immune response to and protective efficacy of vaccine candidates and non-vaccine countermeasures directed against Shigella requires an accurate evaluation of the immune response raised to and by the administration of these products. The use of anesthetics, analgesics, and tranquilizing drugs would invalidate the results of experiments testing the immune responses and subsequently invalidate the model.
