5. Explain the procedure producing pain and distress. The rats are used to propagate *E. multilocularis* cysts. The time that the likely pain and discomfort occurs in the later stages of cyst development.

6. Provide the scientific justification for not providing the appropriate anesthetics, analgesics, or tranquilizing drugs during procedures where the animal experienced accompanying pain or distress greater than momentary or slight.

The rats cannot be euthanized before the cysts have grown to the point of causing the host pain and discomfort as the proto-scolices have not yet developed to the stage of being infective to the canine or feline definitive host. Once palpable cysts are detected the cotton rats that are affected will be treated with Rat MD's (Gabapentin 45mg and Rimadyl 2mg) daily until the cotton rat is euthanized.
