Re: Animal Welfare Assurance
A3368-01 [OLAW Case 11W]

Dr. Nadine Connor
Associate Vice Chancellor
for Research Policy and Compliance
University of Wisconsin-Madison
(b) (4) Bascom Hall – 500 Lincoln Drive
Madison, WI 53706

Dear Dr. Connor,

The Office of Laboratory Animal Welfare (OLAW) acknowledges receipt of your November 30, 2021 letter reporting an instance of noncompliance with the PHS Policy on Humane Care and Use of Laboratory Animals at the University of Wisconsin - Madison. Your letter supplemented the information in the preliminary telephone report on the same day. According to the information provided, OLAW understands that an adult male macaque did not receive its prescribed valium treatment for self-directed behavior. The one missed treatment did not result in an increase in self-directed behavior as the animal was currently receiving more than one agent to combat the unwanted behavior. A root cause analysis revealed that the animal caretaker signed off on the treatment but initially could not find the agent to be administered and subsequently forgot to give the treatment. The caretaker involved in the incident was counseled regarding not signing off on a treatment before it is completed. A statement will be added to the treatment SOP reminding personnel that they should not sign-off on a treatment before it is administered. The animal involved was supported by PHS funds.

The consideration of this matter by the University of Wisconsin - Madison was consistent with the philosophy of institutional self-regulation. Similarly, the actions taken to address the issue and prevent recurrence were appropriate. We appreciate being informed of this matter and find no cause for further action by this office.

Sincerely,

Brent C. Morse

Dear Dr. Morse:

The University of Wisconsin-Madison, in accordance with Assurance A3368-01 and PHS Policy IV.F.3, provides this report of an incident first reported to you via telephone by Dr. Janet Welter on November 29, 2021.

In this incident, an adult male macaque did not receive its prescribed valium treatment for self-directed behavior. The one missed treatment did not result in an increase in self-directed behavior as the animal was currently receiving more than one agent to combat the unwanted behavior. A root cause analysis revealed that the animal caretaker signed off on the treatment but initially could not find the agent to be administered and subsequently forgot to give the treatment. The caretaker involved in the incident was counseled regarding not signing off on a treatment before it is completed. A statement will be added to the treatment SOP reminding personnel that they should not sign off on a treatment before it is administered. The animal involved was supported by PHS funds.

The LSVC ACUC discussed this incident in full committee and determined that the corrective steps taken were appropriate. If you have further questions, please feel free to contact either of us or Dr. Janet Welter.

Sincerely,

(b) (6)
