Re: Animal Welfare Assurance
#A3456-01 [OLAW Case 10F]
UMN IACUC #38243A

Dr. Michael J. Oakes
Interim Vice President for Research
University of Minnesota
(b) (4) Johnston Hall - 101 Pleasant St., SE
Minneapolis, MN 55455

Dear Dr. Oakes,

The Office of Laboratory Animal Welfare (OLAW) acknowledges receipt of your June 2, 2022 letter reporting an adverse event at the University of Minnesota. This letter had not been preceded by a preliminary report to OLAW.

According to the information provided, this Office understands that the University of Minnesota Animal Care and Use Committee (ACUC) determined that an adverse event occurred with respect to the death of an animal in a mouse cage. The final report states a recently weaned mouse was trapped between the wire frame and cage lip. As a result, the animal was crushed which led to its death when the cage was returned to the rack. Animal care staff discovered the animal on May 11, 2022. In response to the incident, the Principal Investigator (PI) discussed the incident with all lab members to reinforce training regarding the following:

- The cage should be examined immediately after the wire frame is placed to ensure all mice are in the base of the cage.
- Any resistance to closing the cage and/or returning it to the rack means the cage needs to be placed under the laminar flow hood to check and remove the blockage.
- The IACUC will monitor ongoing compliance in the lab through annual post-approval monitoring.

It is noted that this research is supported by NIH funding. Based on its assessment of this explanation, OLAW understands that the University of Minnesota has implemented appropriate measures to correct and prevent recurrences.

We appreciate being informed of these matters and find no cause for further action by this Office.

Sincerely,

Jacquelyn T.

RE: University of Minnesota Animal Care Program D16-00288 (A-3456-01)
NIH Grant Number: P01 AI35296
UMN IACUC #38243A

Dear Dr. Wolff,

In keeping with the terms of our assurance, please be informed that we are making a report of an adverse event related to an IACUC approved, NIH funded study involving mice. The basis of this report results from a self-reported incident. The report outlined that a recently weaned mouse became trapped between the wire frame and cage lip, and the mouse was crushed and killed when the cage was placed on the rack. This incident involved one mouse and was discovered by animal care staff on May 11, 2022.

We want to inform you that we consider this matter closed. The PI has discussed the incident with all lab staff to make them aware of the incident and to reinforce training that a) the cage should be examined immediately after the wire frame is placed, to make sure that all the mice are in the base of the cage, and b) that any resistance to closing the cage and/or placing it into the rack means that something is wrong and that the cage needs to be moved back into a laminar flow hood to check and remove the blockage. The IACUC believes this to be an isolated incident that is not indicative of systemic problems with either the cages themselves or personnel training in handling of mice. However, the IACUC will monitor ongoing compliance in this lab through annual post approval monitoring and will be attentive to any future issues of this type throughout the animal program.

Sincerely,

(b) (6)

Dear Dr. Wolff,

Attached please find two reports-one of non-compliance and one of an adverse event. Please let me know if you have any questions.

Thank you,
