IACUC FINAL REVIEW

I. Terminating protocol

Protocol Number: 21-1843T

Protocol Title: Native Snakes in the ASU Lake Havasu Biology Lab

Principal Investigator: [REDACTED]

Termination Date: October 11 2021

II. Check one

☐

The research or teaching was never undertaken.

☒

The research, teaching, or display was conducted.

Describe any significant animal welfare issues, e.g., health problems or accidental deaths, encountered since the last annual review.

The California Kingsnake was found deceased on 30 July 2021, cause of death was unknown, the animal was active and ate earlier that week and showed no signs of illness or other health problems. The Rosy Boa was euthanized by our exotics veterinarian on 24 September 2021 after examination showed she was suffering from a painful, age-related spinal disorder.

If you DID NOT purchase your animals through the Department of Animal Care Technology (DACT), did your animal use exceed the predicted numbers approved in this protocol? Yes ☐ No ☐

III. Did the pain status stated on the protocol remain appropriate for the procedures performed? Yes ☒ No ☐

If "No," please provide a brief explanation: _____

IV. Provide a statement on progress of your research under this protocol:

_____ This was a teaching protocol and the animals were used in Spring 21 courses and the Boa was handled by students earlier this semester.

V. Certification

By signing this report, I certify that, to the best of my knowledge, the information included herein is accurate and complete.
