

**Explanation of Animals Listed in Column E**  
**2021-2022 USDA Annual Report for Registration Number 23-R-0012**

**Nonhuman primates**

Two (2) nonhuman primates (*Macaca fascicularis*) are listed in Category E.

**Toxicology Study**

Two (2) monkeys (*Macaca fascicularis*) were on a toxicology study evaluating a novel compound. The animals exhibited abnormal clinical signs including vomiting, decreased activity, decreased appetite, and/or excessive salivation. Dosing was discontinued for both monkeys prior to the end of the study. The animals were provided with supplemental food. One of the animals was thought to have aspirated vomitus, removed from study early and then treated with antibiotics and analgesics. The animal's clinical signs improved with treatment. No analgesics, anesthetics or sedatives were given during the study because it would have confounded the study that was conducted in accordance with US Food and Drug Administration Good Laboratory Practice for Non-Clinical Laboratory Studies, 21 CFR Part 5858.
