3.75(e)

HOUSING FACILITIES, GENERAL.

Food storage.

**There was an uncovered plastic bowl partially filled with a diluted milk product (used for positive reinforcement) sitting on a table in the squirrel monkey housing room. The bowl was next to the scale that is used frequently during the day to weigh the animals, and there were 4-6 pre-filled 3cc dosing syringes partially submerged in the liquid. According to facility personnel, the diluted milk product is prepared daily, left on the table during the day, and offered to the animals periodically throughout the day. The cover for the bowl was next to the bowl. In addition, the label on the can of the milk product states "refrigerate after opening".

Per this Section of the Regulations, all food must be stored in a manner that prevents contamination and deterioration of its nutritive value, and also open food supplies must be kept in leak-proof containers with tightly fitting lids to prevent spoilage and contamination.

Leaving the diluted milk product out on the table during the day in an uncovered bowl next to the scale does not prevent possible contamination and/or spoilage of the milk, and may affect its nutritive value.

The facility needs to ensure that any opened food supplies are stored in a container with a tightly fitting lid and also needs to determine the appropriateness of leaving the milk product out on the table during the day.

Correct by 5/12/17.

Inspection Report

3.84(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Housekeeping.

**Several housekeeping issues were identified during the inspection of NHP housing rooms and the premises. There was a thin film of dirt noted on the surfaces of plastic storage containers used to store surplus food receptacles and other supplies; surfaces of shelving units in the animal rooms had a thin film of dirt and some particulate debris; spray bottles of disinfectant and window cleaner as well as cleaning implements were found next to clean food bowls; many of the shelves and counters in the housing rooms were cluttered in appearance due to the amount of equipment and husbandry supplies being stored on them; and in the 2nd floor cage wash room there were 2 dirty acrylic food receptacles that contained food particulate residue on a shelf next to husbandry items.

Per this Section of the Regulations, premises must be kept clean to facilitate the husbandry practices required in this subpart. The presence of dirt and particulate debris on equipment, the storage of cleaning supplies next to food bowls, and putting dirty food receptacles next to husbandry items does not constitute good housekeeping and husbandry practices. The presence of clutter in the housing rooms interferes with the ability to keep the premises clean and neat.

The facility needs to review its housekeeping practices and then ensure that all staff are familiar with these practices in order to maintain the cleanliness of the housing rooms and the premises.

Correct by 5/12/17.

NOTE – Inspection conducted 5/3/17 and 5/4/17. Exit briefing held 5/4/17 on-site with facility representatives.

Type: ROUTINE INSPECTION
Date: 16-JUL-2018

3.75(c)(3)

HOUSING FACILITIES, GENERAL.

In the squirrel monkey housing room, dried excreta was observed on the floor of some enclosures. Some enclosures were noted to have walnut-sized amounts of dried feces, while two enclosures were noted to each have approximately 3x3" pile of fecal material on the enclosure floor. Two hard rubber enrichment items were noted to be covered with feces. The facility manager confirmed that the room had already been serviced that morning by animal care staff. Hard surfaces with which nonhuman primates come in contact must be spot cleaned daily to prevent the accumulation of excreta.

To be corrected by: July 23rd, 2018.

This inspection was conducted 7/16/18 -7/17/18 and the exit interview was conducted on site with facility representatives.

Section: _____

3.80(a)(2)(xi) PRIMARY ENCLOSURES.

A nonhuman primate's ability to make normal postural adjustments must be considered when determining enclosure size. Ensure enclosures provide sufficient space for nonhuman primates to make normal postural adjustments with freedom of movement.

Hello Eilis,

Thank you for sending these documents and I acknowledge the receipt of the report. I will contact you again with confirmation that the correction has been made as soon as I check with our staff - I believe they attended to cleaning the cages immediately and we are already exploring plans for how to maintain daily spot checks/cleaning so as to be in compliance with the regulations.

Thanks again for your professionalism and assistance with making our animal research program the best it can be. I also appreciate your willingness to serve as a resource for us for improvements that will benefit our animals' enrichment and welfare. I think I can speak for (b) (6), (b) (7)(C) and the ACF staff in looking forward to working with you in the future.

Best regards,

External Email - Use Caution

Good evening, (b) (6), (b) (7)(C)

I've attached the inspection documents from our inspection on Monday and Tuesday. These documents include the inspection report with the inspected animal inventory, the protocol selection sheet, and the teachable moment. **Please respond to this email to confirm receipt** – your response will serve as your signature on this document.

I've also attached the tech note regarding the incentive program, as we discussed. Please don't hesitate to contact me with any questions or concerns. It was a pleasure to meet you and the ACF team, and I'm looking forward to working with you!

Thanks,
Eilis

Eilis Karr, DVM
