

Summary of Exceptions to the Regulations and Standards for FY: 2017 As Reviewed and  
Approved by the Virginia Tech IACUC

Registration Number: 52-R-0012

Customer ID Number: 492

One exception to the standards were reviewed and granted related to animal husbandry SOPs for animals maintained by the CVM Teaching and Research Animal Care Support Services staff:

1. Request to grant a deviation in floor space per animal for gnotobiotic piglets. The justification provided by the PI for the deviation was: (a) Piglets are <2kg at birth and <6kg at euthanasia (Gnotobiotic pigs stay on milk diet thus grow slower than conventional pigs). (b) The 1.6/sqft/pig is equivalent to the space that is industry standard in agricultural practices. (c) Animals are handled with glove box type gloves which provide a minimal range of motion and this space is required to allow for ease of restraint to minimize stress to the animal during handling. Number of animals (pigs) affected - 70
