Explanatory note for 14 cattle within category E of 2018 annual report of research facility:

Cattle were infected with *Theileria parva*, the cause of East Coast Fever. *Theileria parva* causes an inflammatory infectious disease, and our experimental design includes options to administer anti-inflammatory drugs (e.g., banamine) to animals that develop fever and other signs of inflammation. The cattle identified as Column E did receive analgesics within the prescribed time frame, however the animal had experienced fever for a longer period of time than planned. Therefore, we are reporting them in Column E.

Name of lab: Animal Disease Research Unit
REGISTRATION NUMBER: 91-G-0001
EXPLANATION FOR THE USE OF ANIMALS LISTED IN COLUMN E

Explanatory note for 27 cattle within category E of 2018 annual report of research facility:

Cattle were infected with *Theileria parva*, the cause of East Coast Fever. *Theileria parva* causes an inflammatory infectious disease, and our experimental design includes options to administer anti-inflammatory drugs (e.g., banamine) to animals that develop fever and other signs of inflammation.
