P.O. Box 290941
Kerrville, TX 78028

Customer ID: **334158**
Certificate: **74-G-0002**
Site: 001
Knipling-Bushland

Type: ROUTINE INSPECTION
Date: 17-MAY-2017

2.33(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

Several of the animals in the holding pen had multiple various sized areas of circular hair loss lesions on their face, neck and/or body regions. There was no indication or documentation that these areas of hair loss had been identified, or that the veterinarian had been notified. The facility must use appropriate method to prevent, control, diagnosis, and treat diseases on all animals at the facility. The facility called the veterinarian during the inspection.

2.33(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

The daily observation forms at the facility are incomplete and there is no indication the SOPs are being followed. The standard operating procedures state animals will be brushed and receive hydrotherapy. There was no indication or documentation that these activities were conducted. There is minimal to no documentation of treatments or records that the veterinarian was notified when issues such as coughing, diarrhea, hair loss, eye issues or decreased appetite were noted during daily observations. Following SOPs and providing frequent and direct communication with the veterinarian is important for the health and well-being of the animals. The facility must document treatments and have a mechanism of direct and frequent communication with their veterinarian to ensure timely and accurate treatments of animals.

Correct by 6-1-2017.

This inspection and exit interview were conducted with facility representative.
