Type: ROUTINE INSPECTION
Date: 09-JAN-2018

2.33(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

* The following expired drugs were found in multiple areas used to store medications for use in regulated species throughout the facility: LubriFresh PM Eye Ointment (Exp: 11/2017); AluSpray (Exp: 7/2017); Epinephrine Injectable (Exp: 6/2017). Review of the most recent finalized Semi-Annual Program Review revealed that the IACUC had also previously identified multiple areas with expired medications. Use of expired drugs is not considered acceptable veterinary practice. These drugs were removed for discard during the inspection.

From this day forward: Ensure use of in-date drugs for regulated activity.

* During this inspection, the inspectors found a bottle of non-pharmaceutical grade chloral hydrate powder. Conversation with the PI and subsequent review of associated protocol (#604) revealed use of this compound as an injectable anesthetic in veterinary teaching horses. The protocol did not include any drug preparation procedures or justification for use of this non-pharmaceutical grade drug in regulated animals. The use of non-pharmaceutical grade drugs is not considered adequate routine veterinary care. The facility shall maintain a program of adequate veterinary care, including appropriate use of anesthetic drugs.

To be corrected by: 04/30/2018.

3.6(a)(1)

PRIMARY ENCLOSURES.

The ceiling of one room used as a primary enclosure for 7 cats had a slow leak of a clear liquid. The liquid was pooling on the floor of the enclosure. There were two white spots on the floor adjacent to the pooling liquid where liquid may have accumulated previously. The ceiling material was visibly wet and bulging with an irregular surface in an area of approximately 2ft x 2ft. The evident damage extended under a light fixture and around a metal vented structure. The cats had access to the pooling liquid and the area underneath the light fixture. The facility manager reported previous submission of two separate work orders to address this issue: one on Oct. 24, 2017 and a second

Inspection Report

on Dec. 7th, 2017. No assessment or repairs have been performed to date. The cats may be injured by access to unknown substances or collapse or other failure of damaged ceiling structure. Primary enclosures must be structurally sound and kept in good repair.

To be corrected by: 01/29/2018.

This inspection and exit interview were conducted with OLAC Director/Attending Veterinarian and additional facility staff.

Additional Inspectors

Karr Ellis, Veterinary Medical Officer
