RESEARCH BUILDING

Type: ROUTINE INSPECTION
Date: 08-AUG-2018

3.84(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

In a food storage area in the Comparative Medicine Annex there were stacked bag of medicated primate feed that had multiple rodent dropping and urine staining present on top. These bags were located near refrigerators storing produce.

Also in the same room along the far corner wall near the door to the loading dock there was an accumulation of rodent droppings some of which were lighter in color demonstrating that they were drying out.

In an adjoining kitchen area there was a fly on a dirty counter that also had an unwashed knife.

In an empty animal room #137 in the Comparative Medicine Annex there were rodent droppings noted on the floor.

An effective program for control of insects, external parasites affecting nonhuman primates, and birds and mammals that are pests, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

Correct from this day forward.

This inspection and exit interview were conducted with facility representatives.

Subject: RE: USDA Inspection Report *Reply Requested*

Dear Dr. Boone,

We appreciate the opportunity you provided during our exit briefing on August 9, 2018, to review and discuss the items you indicated would be a citation in our Inspection Report, as well as the items you addressed verbally. We were surprised that the Inspection Report we received via email last Friday included issues we believed were being addressed only verbally, as well as one item that was not discussed at all. In that regard, we apologize for our misunderstanding and provide the following additional information for your consideration, including the actions we have taken following your visit.

- The medicated feed bags were purchased for a specific activity that ended in late June. We have disposed of the feed and will revise our internal procedures to ensure that feed we know we will no longer use is immediately discarded or stored in sealed containers until appropriate disposition can be made. It was unusual that the feed remained in the loading dock area that long, but it did and we should have previously removed it to the dumpster.
- The fecal pellets observed along the wall adjacent to the loading door have been removed during the scheduled daily room cleaning. We use a daily room checklist that includes cleaning, and I have confirmed that staff are using it appropriately to note room check activities and that the cleanings are taking place on a daily basis, as required.

- The knife observed during your visit had been used to cut fruit on the counter; the fruit was being fed to primates while the VMOs were on site. The area has since been cleaned, of course, and a sign has been posted reminding staff to clean the counter and utensils prior to leaving the area. We have consolidated all fruit and vegetable cutting to a room in a different building – that room is better suited for the preparation of large amounts of food.
- The empty animal room (#137) had not been used since May 2018. Because it is not in use for animals, it is on the weekly non-animal space sanitation schedule. I have instructed staff to add an as-needed cleaning day when sanitation needs are observed in this room.
- We have an aggressive pest management program in place for this building, and we will continue that program. It includes monthly visits by an external pest management company for assessment and application of appropriate pesticides. Rodent control does not allow use of pesticides due to the risk a toxic rodent could present to the animals. Our existing program of 'trap and euthanize' will continue, but with an increased focus and greater intensity.

Dr. Boone, thank you for recognizing that we manage a complex working facility with many different species on a daily basis. We understand that on occasion, there may be an issue which occurs at a single location in our campus-wide program that could benefit from enhanced attentiveness in an otherwise strong, compliant, and secure program of animal care and use. We believe the actions described above adequately address the issues documented and trust you do as well – if not, please advise. Thank you for the intense and detailed review of our program and for the commendations offered regarding the quality of animal care and use at the University of Oklahoma Health Sciences Center both in our exit briefing and in your email correspondence.

Best wishes,

Dr. (b) (6), (b) (7)(C)

Attached is the inspection report and inventory. Please reply to this e-mail stating your name and that you have received the report. This will act as your signature of receipt. If you have any questions please feel free to call me at your convenience. Your signature does not imply that you agree with the findings or that you cannot dispute the findings. All it means is that you have seen the report and have received a copy of the report.

Thank you for your cooperation, Bonnie

Research Facility Protocol Selection Worksheet^{*}

Legal Name: University of Oklahoma Health Sciences Center

Customer Number:
1468

Certificate Number: 73-R-0007

Inspection Date:
8/8/18

Site Number: 001

Inspector: Drs. Boonie Boone and Courtney Jernigan

Reasons Protocols Were Selected for Review :	How Many Protocols Were Selected
1. Protocols identified during inspection of concern (select all)	0
2. Column E protocols (select all)	0
3. Protocols with IACUC-approved exemptions/exceptions (select all)	0
4. Protocols cited as noncompliant and not corrected during the last inspection (select all)	0
5. Additional Protocols Selected: a. If <5 remaining protocols, select all remaining: b. If >5 remaining protocols, select 5 additional protocols: 1) Protocol for each regulated species and/or, 2) Protocols involving high risk procedures (see Chapter 7, Animal Welfare Inspection Guide for guidance):	6
Total Protocols Selected and Reviewed	6

*Note: Protocol selection guidance applies to protocols which have been initially approved, or have had significant changes approved, since the last inspection. For protocols reviewed by an Animal Care Veterinary Medical Officer within the last year, professional judgment should be used in determining whether another review is necessary.
